

SKIPZERO

The source base for a paid SaaS.

A downloadable Next.js codebase with auth, billing, access, email, an app shell, tests and coding-agent instructions already in the repository.

BUYER RELEASE 0.1.0 · ENGLISH EDITION · 1 SEPTEMBER 2026

EXACTLY WHAT IS SOLD

Source code, documentation and a personal commercial licence.

SkipZero is not a hosted service, a no-code builder or a finished SaaS. You connect your own provider accounts, set your brand and legal details, and build the product-specific feature.

2 separate buyer ZIPs	16 numbered setup guides	3 agent tool formats
---	--	--

WHAT YOU GET

Two ZIPs. One clear choice.

Founder is the complete Starter package at the launch price. All-in contains that same foundation plus metering, administration and additional agent workflows.

FOUNDER / STARTER

The paid-SaaS foundation

- ✓ Next.js, TypeScript and an application shell
- ✓ Supabase auth, migrations and owner-scoped RLS
- ✓ Stripe one-time and subscription billing
- ✓ Verified webhooks and access entitlements
- ✓ Transactional email, tests and 16 numbered guides
- ✓ AGENTS.md, CLAUDE.md and Cursor rules

Founder and Starter deliver the same ZIP.

ALL-IN

Starter, plus usage products

- ✓ Everything in Founder / Starter
- ✓ Credit ledger and atomic credit consumption
- ✓ Refund and dispute revocation handling
- ✓ Basic administration and audit history
- ✓ 10 coding-agent workflows
- ✓ Five micro-SaaS implementation recipes

Credits and admin are All-in only.

CONNECTED ARCHITECTURE

01	02	03	04
Identity Supabase Auth	Payment Stripe Checkout	Access Entitlements	Data Postgres + RLS

BUYER SETUP

The integrations are implemented; your accounts are not included.

Create and fund your own Supabase, Stripe, Resend, Google and hosting accounts. Add their credentials, apply the supplied migrations, configure your products and domain, then run the documented provider checks before production.

RELEASE EVIDENCE

What was actually checked.

Both delivered ZIPs were extracted into clean directories and retested as buyer packages. No live-provider result is represented as complete without buyer credentials.

FOUNDER / STARTER 145 passed 6 provider-dependent tests skipped Buyer-package checks ✓ Frozen offline dependency install ✓ Lint and TypeScript checks ✓ Production build ✓ 4/4 HTTP boundary tests	ALL-IN 153 passed 5 provider-dependent tests skipped Buyer-package checks ✓ Frozen offline dependency install ✓ Lint and TypeScript checks ✓ Production build ✓ 4/4 HTTP boundary tests

skipzero-all-in-0.1.0.zip	214	a76d792d58f638aa9930b156fb4de9a28656f0239d02f30ca3eb30ab46b0e288

LIVE PROVIDER CHECKS PENDING

Production readiness is completed in the buyer’s own accounts.

Google OAuth callbacks, Stripe sandbox payment and webhook delivery, Resend delivery, deployed RLS isolation, and the purchase-to-access flow must be exercised after real credentials are added. Skipped provider tests are not counted as passes.

RELEASE CONCLUSION

The two source packages pass their credential-free release checks.

Scope: supplied files and local checks only — not an external certification of future deployments.
